Renovation Inspection—St. Paul Union Depot

Prior to the 2011-2013 renovation of St. Paul Union Depot, Field Environmental Consulting (FEC) identified and quantified asbestos-containment materials (ACMs) through testing.

FEC designed a Scope of Work for removing the ACMs and oversaw the process, confirming that everything went according to plan and no nearby workers or businesses were exposed. During the project, Field Environmental Consulting provided progress updates as well as a final report for the project.

All work was successfully completed without impacting the day-to-day operations of the client.
